

AJITH KUMAR S

Java Full Stack Developer

7338773239 | ajith67200@gmail.com | linkedin.com/in/ajith-kumar-66946a21a | github.com/AjithKumar-67200

Professional Summary

Java Full Stack Developer with 2+ years of experience designing and delivering scalable microservices, RESTful APIs, and full-stack applications using Java, Spring Boot, React.js, and Laravel. Proven expertise in backend development, distributed systems, MySQL database design, Hibernate/JPA, Redis caching, and query optimization for high-throughput logistics platforms processing 5,000+ daily transactions. Experienced in system design, Spring Security, JWT authentication, CI/CD pipelines, performance optimization, and Agile delivery environments. Skilled at leveraging AI-assisted development tools to accelerate productivity and elevate code quality.

Technical Skills

Languages: Java, JavaScript, SQL

Frameworks: Spring Boot, Spring MVC, Spring Security, Hibernate/JPA, React.js

Databases: MySQL, MongoDB, Redis

Tools: Git, Maven, Postman, JMeter, Swagger, Cursor, Antigravity, Claude

Operating Systems: Windows, Linux

Concepts: Microservices Architecture, Distributed Systems, System Design, REST APIs, Backend Development, JWT Authentication, Spring Security, Query Optimization, Caching (Redis), Performance Optimization, Production Support, Exception Handling, Logging, Agile, CI/CD Basics

Professional Experience

Voyage Software Technologies, Chennai

April 2024 – Present

Project: ShipCRM

Tech Stack: Java, Spring Boot, React.js, Flutter, MySQL, MongoDB, Redis, SSE, JWT

- Engineered scalable RESTful APIs for a microservices-based logistics CRM platform, supporting end-to-end shipment processing, real-time tracking, and customer management workflows.
- Architected MySQL schema and optimized complex queries via indexing and execution plan analysis; leveraged MongoDB for flexible, high-volume document storage, improving data retrieval performance and system scalability.
- Spearheaded development of a Flutter-based Driver App for real-time shipment tracking and delivery updates using Server-Sent Events (SSE), accelerating field operations with AI-assisted development tools.
- Integrated Redis caching layer to reduce backend response times and decrease database load, improving overall system performance for concurrent users.
- Fortified system security by designing and implementing role-based access control (RBAC) using Spring Security and JWT authentication, ensuring secure, scoped access across microservices.

Project: SoluShip

Tech Stack: Java, Spring Boot, Laravel, MySQL, MongoDB, REST APIs, JWT

- Delivered core shipment management modules on a distributed system handling 5,000+ daily transactions across 10+ integrated carrier systems, ensuring 99.5% uptime and production stability.
- Engineered and maintained 50+ secure RESTful APIs with robust input validation, JWT authentication, and role-based access control, adhering to backend development best practices.
- Integrated 10+ external carrier and e-commerce platforms including Day & Ross, UPS, DHL, FedEx, Shopify, SEKO360, 3PL providers, and WooCommerce (WordPress) for real-time shipment tracking, automated label generation, order synchronization, inventory updates, and rate comparison.
- Achieved 35% application performance improvement by refactoring legacy code, optimizing complex SQL queries, and eliminating N+1 database access patterns through Hibernate/JPA tuning.
- Provided production support and incident resolution, implementing proactive monitoring with Grafana dashboards to sustain 99.5% system uptime across business-critical workflows.

Key Projects

ShipCRM – A microservices-based logistics CRM platform built with Java, Spring Boot, and React.js, featuring real-time shipment tracking via SSE, Redis caching, role-based access control with Spring Security and JWT, EDI invoice processing, and automated report generation through scheduled background jobs. Backed by MySQL for transactional data and MongoDB for flexible document storage.

SoluShip – A distributed shipping automation platform built with Java, Spring Boot, and Laravel, integrating 10+ carrier APIs (UPS, DHL, FedEx) for real-time tracking, automated label generation, and rate comparison. Includes EDI invoice handling, custom report scheduling via background jobs, and optimized MySQL query performance supporting 5,000+ daily transactions.

Education

Bachelor of Engineering in Mechanical Engineering

Jaya Engineering College, Chennai

2021
